PROVENZA SERIE

Con su enfoque distintivo en la creación de espacios amplios y luminosos, es la personificación de la elegancia y la funcionalidad. Con una versatilidad excepcional, se divide en dos vertientes que exploran la esencia de la naturaleza de maneras únicas.

En una auténtica expresión de la madre naturaleza, la primera vertiente de Provenza se distingue por la incorporación de tonos continuos y la armonía entrelazada del cemento. Las piezas de pequeño formato base (33x33, 16,25x33, 16,25x16,25), junto con peldaños ml y cartabones ml 33x33, revelan un realismo máximo de los detalles presentes en el cemento original.

Por otro lado, esta serie despliega su segunda vertiente a través de un diseño personalizado para gran formato, alineando espacios tanto en interiores como en exteriores, e incluso en entornos hídricos como piscinas. Este enfoque crea un impacto visual impresionante, confiando elegancia, sofisticación y distinción a cualquier proyecto, en consonancia con la tendencia IN&OUT&IN, tan solicitada por arquitectos e interioristas.

Las características esenciales de la serie Provenza abarcan tanto interiores como exteriores y zonas hídricas, destacando su adaptabilidad. Con formatos y piezas especiales fabricadas mediante extrusión, esta serie ofrece soluciones estéticas y funcionales para abordar cambios de plano y encuentros en proyectos diversos. Así, cada detalle se integra armónicamente para lograr resultados excepcionales en términos de diseño y rendimiento.

With its distinctive approach to creating spacious and bright environments, it embodies both elegance and functionality. With exceptional versatility, it is divided into two branches that explore the essence of nature in unique ways.

In an authentic expression of Mother Nature, the first branch of Provenza stands out for its incorporation of continuous tones and the intertwined harmony of cement. The small-format base pieces (33x33, 16.25x33, 16.25x16.25), along with 33x33 steps and treads, reveal the maximum realism of the details found in original cement.

On the other hand, the series unfolds its second branch through a custom design for large formats, aligning spaces both indoors and outdoors, and even in aquatic environments such as pools. This approach creates an impressive visual impact, adding elegance, sophistication, and distinction to any project, in line with the highly sought-after IN&OUT&IN trend among architects and interior designers.

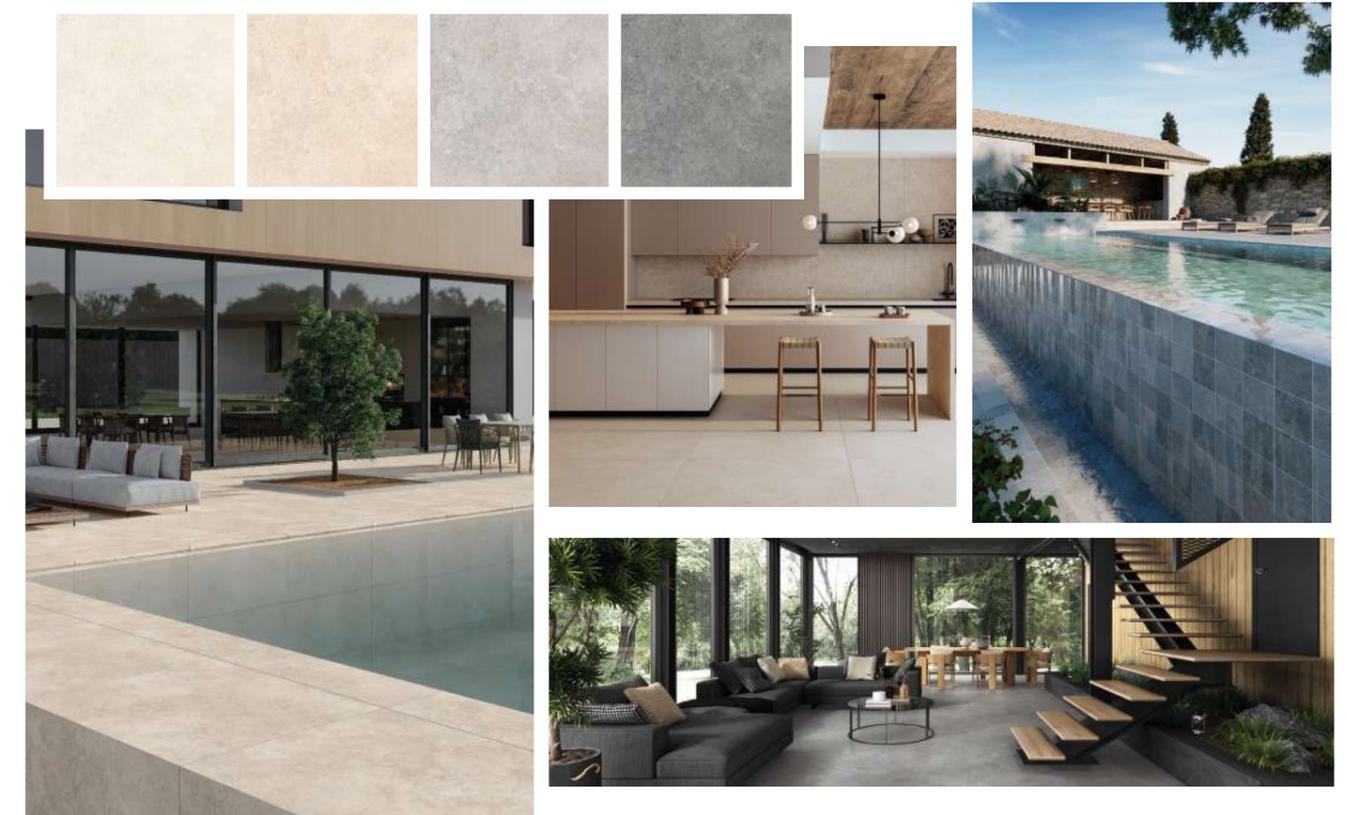

The essential features of the Provenza series cover both indoor and outdoor spaces, as well as wet areas, highlighting its adaptability. With formats and special pieces made through extrusion, this series provides aesthetic and functional solutions to address changes in plane and intersections in diverse projects. Thus, every detail integrates harmoniously to achieve exceptional results in terms of design and performance.
